Module - 4

➢ **SE- HTML and CSS**

1.Define the terms: Website, Webpage, Web browser, Web server, HTML,CSS

- **Answer :**

1. **Website :**
- Definition: A collection of related web pages that are typically identified by a common domain name.
- Simple Explanation: It's like a digital space on the internet where you can find information, images, or services related to a particular topic or business.

2. **Webpage :**
- Definition: A single document on the internet, often containing text, images, and links to other pages.
- Simple Explanation: It's like a single page in a book, but on the internet. You read or interact with it to get information.

3. **Web browser :**
- Definition: A software application that allows you to access and navigate the World Wide Web.
- Simple Explanation: It's like a gateway to the internet. You use it to open and view websites and web pages.

4. **Web server :**
- Definition: A computer that stores and serves website content to users over the internet.
- Simple Explanation: It's like a host or a storage place for websites. When you visit a website, you're connecting to its web server to see the content.

5. **HTML :**
- Definition: The standard markup language used to create web pages. It structures content on the web using tags.
- Simple Explanation: It's like the skeleton of a webpage. HTML uses tags to define elements like headings, paragraphs, and links.

6. **CSS :**
- Definition: A style sheet language used to describe the presentation of a document written in HTML.
- It controls the layout and appearance of web pages.
- Simple Explanation: It's like the clothes and colors you put on the HTML skeleton.
- CSS helps make web pages look attractive and organized by styling elements.
